

IN THE ABSTRACT OF THE DISCLOSURE

Please substitute the accompanying Abstract of the Disclosure, which is contained on a separate sheet of paper, as required by 37 C.F.R. §1.72(b), for the Abstract originally of record, and included with the "Literal English Translation" of P.C.T. Application No. PCT/CH03/00256, for the instant patent application.

ABSTRACT OF THE DISCLOSURE

An effervescent tablet dispenser includes an annular lower part, which may be assembled onto the open end of a container tube, and a lid for closing the annular lower part. A dispenser tab extends diametrically in a tongue-like manner in the lower annular part in its clear opening. The dispenser tab is integrally formed on the inner edge of the lower part as a film hinge and, relative to the lower annular part, may be pivoted outwardly in an axial direction by at least 10° . When the container tube is tipped, the dispenser tab, under the load of a tablet lying on it, pivots approximately 10° downwardly and the lowermost tablet may then be easily removed with one hand of a user, while the remaining tablets are retained in the tablet dispenser.
